

ABSTRACT

A multilayered packaging film having good antifog performance that is
5 suitable for use in food packaging. The multilayered film comprises a nylon
film having first and second surfaces; a silicone oil on the first surface of the
nylon film; and a sealant film on the second surface of the nylon film, either
directly or via an intermediate adhesive tie layer. An antifog composition is
either contained within at least part of the sealant film or is coated on a surface
10 of the sealant film opposite the nylon film. The silicone oil effectively blocks
the migration of the antifog composition into the nylon film when the
multilayered film is stored in roll form.
